Laboratory Procedures

1,2-Dipalmitoyl-sn-glycero-3-PC-d₉ (1,2-DPPC-d₉) is intended for use as an internal standard for the quantification of 1,2-DPPC (Item No. 10009473) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

1,2-DPPC-d₉ is supplied as a crystalline solid. A stock solution may be made by dissolving the 1,2-DPPC-d₉ in the solvent of choice, which should be purged with an inert gas. 1,2-DPPC-d₉ is slightly soluble (0.1-1 mg/ml) in a 1:1 solution of acetonitrile:methanol and sparingly soluble (1-10 mg/ml) in methanol.

Description

1,2-DPPC is a zwitterionic glycerophospholipid commonly used in the formation of lipid monolayers, bilayers, and liposomes for use in a variety of applications.¹⁻⁴ It has been used in the formation of proteoliposomes for implantation of γ-glutamyl transpeptidase into human erythrocyte membranes.³ Incorporation of glycosphingolipid antigens into 1,2-DPPC-containing liposomes increases the immunogenicity of the antigens in mice.⁴
