PRODUCT INFORMATION

VU0453379 (hydrochloride)

Item No. 41392

Formal Name: 2-cyclopentyl-2,9-dihydro-9-methyl-N-[[[(2S)-1-(1-methylethyl)-2-pyrrolidinyl]methyl]-1-oxo-1H-pyrido[3,4-b]indole-4-carboxamide, monohydrochloride

MF: C₂₆H₃₄N₄O₂ • HCl

FW: 471.0

Purity: ≥98%

Supplied as: A solid

Storage: -20°C

Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

VU0453379 (hydrochloride) is supplied as a solid. A stock solution may be made by dissolving the VU0453379 (hydrochloride) in the solvent of choice, which should be purged with an inert gas. VU0453379 (hydrochloride) is sparingly soluble (1-10 mg/ml) in DMSO and slightly soluble (0.1-1 mg/ml) in acetonitrile.

Description

VU0453379 is an allosteric agonist and positive allosteric modulator (ago-PAM) of glucagon-like peptide 1 receptor (GLP-1R).¹ It induces calcium mobilization in 9-3-H cells expressing human GLP-1R (EC₅₀ = 1.3 μM) and enhances GLP-1-, exenatide-, or liraglutide-induced calcium mobilization in the same cells (EC₅₀s = 1.8, 8.4, and 30 μM, respectively). VU0453379 (30 μM) potentiates exenatide-induced insulin secretion in primary mouse pancreatic islets. It reverses catalepsy induced by haloperidol (Item No. 12014) in a rat model of Parkinson's disease motor symptoms when administered at a dose of 30 mg/kg.
