Laboratory Procedures

BAY-899 is supplied as a solid. A stock solution may be made by dissolving the BAY-899 in the solvent of choice, which should be purged with an inert gas. BAY-899 is sparingly soluble (1-10 mg/ml) in DMSO and slightly soluble (0.1-1 mg/ml) in acetonitrile.

Description

BAY-899 is an antagonist of the luteinizing hormone receptor (LHR; IC₅₀s = 185 and 46 nM for the human and rat receptors, respectively).¹ It is selective for LHR over thyroid-stimulating hormone (TSH) and follicle-stimulating hormone (FSH) receptors (IC₅₀s = 24 and >16 μM, respectively, for the human receptors) and a panel of 25 G protein-coupled receptors (GPCRs) at 10 μM. BAY-899 (12.5 mg/kg per day) reduces serum levels of estradiol in female rats.
