### Laboratory Procedures

Quetiapine sulfoxide is supplied as a solid. A stock solution may be made by dissolving the quetiapine sulfoxide in the solvent of choice, which should be purged with an inert gas. Quetiapine sulfoxide is sparingly soluble (1-10 mg/ml) in ethanol and DMSO.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of quetiapine sulfoxide can be prepared by directly dissolving the solid in aqueous buffers. Quetiapine sulfoxide is slightly soluble (0.1-1 mg/ml) in PBS (pH 7.2). We do not recommend storing the aqueous solution for more than one day.

### Description

Quetiapine sulfoxide is an inactive metabolite of the atypical antipsychotic quetiapine (Item No. 14152).<sup>1</sup> Quetiapine sulfoxide is formed from quetiapine via the cytochrome P450 (CYP) isoform CYP3A.
