Laboratory Procedures

Dendrophenol is supplied as a solid. A stock solution may be made by dissolving the dendrophenol in the solvent of choice, which should be purged with an inert gas. Dendrophenol is soluble (≥10 mg/ml) in ethanol and DMSO.

Description

Dendrophenol is a polyphenol that has been found in *D. nobile* and has diverse biological activities.¹⁻³ It decreases viability of, and induces cell cycle arrest at the S phase in, HCT116 colorectal cancer cells when used at a concentration of 10 μM.¹ Dendrophenol (3 or 10 μM) inhibits the migration of MDA-MB-231 breast cancer cells.² It inhibits LPS-induced increases in inducible nitric oxide synthase (iNOS), COX-2, hypoxia-inducible factor-1α (HIF-1α), and NF-κB levels and NF-κB nuclear translocation in RAW 264.7 macrophages when used at a concentration of 100 μM.³ Dendrophenol (50 or 100 mg/kg per day) reduces tumor size without affecting body weight in an HCT116 mouse xenograft model.¹ It decreases total lung weight in an MDA-MB-231 mouse xenograft model when administered at a dose of 100 mg/kg per day.²
