Laboratory Procedures

Isopentenyl pyrophosphate (IPP) (ammonium salt) is supplied as a solid. A stock solution may be made by dissolving the IPP (ammonium salt) in the solvent of choice, which should be purged with an inert gas. IPP (ammonium salt) is soluble in methanol.

Description

IPP is a precursor in the biosynthesis of isoprenoids.¹ It is formed from acetyl-CoA (Item No. 16160) via the mevalonate pathway, and it can be isomerized to dimethylallyl diphosphate (DMAPP; Item No. 63180) by IPP isomerase. IPP can also be formed from pyruvate and glyceraldehyde-3-phosphate via the nonmevalonate pathway.
