Laboratory Procedures

9-keto Latanoprost is supplied as a crystalline solid. A stock solution may be made by dissolving the 9-keto latanoprost in the solvent of choice, which should be purged with an inert gas. 9-keto Latanoprost is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of 9-keto latanoprost in these solvents is approximately 100 mg/ml.

9-keto Latanoprost is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, 9-keto latanoprost should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. 9-keto Latanoprost has a solubility of approximately 80 µg/ml in a 1:2 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

9-keto Latanoprost is a derivative of the FP receptor agonist latanoprost (Item No. 16812).
