Laboratory Procedures

14(S)-HDHA-d₅ is intended for use as an internal standard for the quantification of 14(S)-HDHA (Item No. 15253) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated *versus* unlabeled).

Description

14(S)-HDHA is an oxygenation product formed by 12-lipoxygenase (12-LO) or 15-LO processing of docosahexaenoic acid (DHA; Item No. 90310).¹ It is a precursor to the pro-resolving mediator maresin 1 (Item No. 10878) and has been found in peritoneal exudates isolated from a mouse model of zymosan-induced peritonitis.
