Laboratory Procedures

HE-3235 is supplied as a crystalline solid. A stock solution may be made by dissolving the HE-3235 in the solvent of choice. HE-3235 is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide, which should be purged with an inert gas. The solubility of HE-3235 in these solvents is approximately 10 mg/ml.

HE-3235 is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, HE-3235 should first be dissolved in DMSO and then diluted with the aqueous buffer of choice. HE-3235 has a solubility of approximately 0.14 mg/ml in a 1:6 solution of DMSO:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

HE-3235 is a synthetic adrenal hormone, an androstenediol analog, that acts as an androgen receptor antagonist.¹ In an androgen receptor-dependent manner, it downregulates anti-apoptotic genes, while increasing the expression of pro-apoptotic genes, thus stimulating apoptosis.¹ HE-3235 has been shown to inhibit androstenediol-dependent LNCaP cell tumor growth both *in vitro* (IC₅₀ = 6 nM) and in xenograft models *in vivo*.^{1,2}
