Laboratory Procedures

C26:1 Sphingomyelin-d₅ is intended for use as an internal standard for the quantification of C26:1 sphingomyelin by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated *versus* unlabeled).

Description

C26:1 Sphingomyelin is a naturally occurring sphingolipid that has been found in human aqueous humor.¹
