### Laboratory Procedures

Oleic acid-hydroxy oleoyl leucine-d<sub>7</sub> is intended for use as an internal standard for the quantification of oleic acid-hydroxy oleoyl leucine by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

### Description

Oleic acid-hydroxy oleoyl leucine is a very long-chain fatty acid composed of oleic acid (Item Nos. 90260 | 24659) connected to hydroxy oleoyl leucine.<sup>1</sup>
