PE-Cy5 Rat IgG_{2b} Isotypic Control

CLCR2B06

LOT:

DESCRIPTION: PE-Cy5 Rat IgG_{2b} isotypic control

SIZE: 0.5 ml

PROTEIN CONTENT: 50 µg

APPLICATION: This isotype control is provided in liquid form for use in flow cytometry. 10 µl is the maximum amount of reagent required for 1x10⁶ cells. Lesser amounts of reagent may be sufficient and it is recommended that the customer determine the optimum amount for each application. When using isotype controls as negative controls, it is recommended that the amount of isotype control and the testing antibody used be equivalent.

PE-Cy5: This conjugate can be used as a third colour reagent in flow cytometry. It requires a 650 nm long pass filter in the FL-3 channel. FL2 - FL3 compensation will be in the range of 1%. Using formalin to fix cells following immunofluorescent staining may cause the degradation of tandem fluorochromes. Cells stained with PE-Cy5 should be analyzed by flow cytometry within 18 hours following fixation.

BUFFERS & PRESERVATIVE: This reagent is provided in phosphate buffered saline and contains 0.1% sodium azide (NaN_3) as a preservative. A highly purified grade of BSA has been added as a stabilizing protein to bring the final concentration to 4-5 mg/ml after conjugation.

STORAGE/STABILITY: Stable at 4°C. **DO NOT FREEZE.** If the reagent is being diluted, it is recommended that only the quantity to be used within one week be diluted. Check label for expiry date.
