Human Albumin Sensitized Glutaraldehyde Stabilized Sheep RBCs

CLD68LS-2
Lot: 1293

DESCRIPTION:

Cedarlane's **CLD68LS-2** are Human Albumin Sensitized Glutaraldehyde-stabilized freshly prepared sheep Red Blood Cells. Glutaraldehyde stabilized red blood cells are produced from freshly washed sheep RBCs by brief exposure to a glutaraldehyde-buffer solution and exhaustive washing in saline. This treatment largely preserves the native antigenicity of the erythrocytes while rendering the cells generally resistant to lysis by osmotic shock, freeze-thawing or immune hemolysis. This reagent can be used directly in hemagglutination procedures, or may be coupled with various proteins for hemagglutination testing.

ATTACHMENT OF HUMAN ALBUMIN TO RBC'S:

Fluorescent agglutinated RBCs are produced when the above lot is mixed with FITC conjugated rabbit anti-human albumin (Cat # CLFAG2140).

SPECIFICITY CONTROL:

No fluorescent agglutinated RBCs are found when the above lot is mixed with FITC conjugated rabbit anti-human IgG (Cat # CLFAG2340).

PRESENTATION:

10 ml of Human IgG Sensitized Glutaraldehyde-Stabilized sheep RBCs in saline with 0.1% NaN₃ (1%).

STORAGE:

Store at 4°C. DO NOT FREEZE.

APPLICATIONS:

This product is suitable for use in hemagglutination assays.

Optimum conditions for use of this product in analytical procedures should be established in each laboratory
