FITC Adsorbed Rabbit anti-Mouse PMN

CLFAD31140

Lot #: 6305-F

Description: Cedarlane's **CLFAD31140** is a FITC-conjugated rabbit IgG fraction directed against mouse PMN's (Polymorphonuclear Leukocytes). This fraction was produced from an antiserum that had been adsorbed repeatedly with mouse red blood cells, thymocytes and spleen cells to remove most antibodies to antigens common among different cell types. This adsorption significantly improves specificity. The FITC conjugate has been purified by removing free fluorochrome, under-conjugated and over-conjugated antibodies.

Presentation: 2 mg in sterile phosphate buffered saline.

Protein Concentration: 3.0 mg/ml

Storage: Divide into useful aliquots and store at -20°C. Avoid prolonged exposure to light.

Preservatives: 0.05% sodium azide

Applications: This antibody is suitable for use in flow cytometry, immunofluorescence and cryostat sections.

Specificity: This FITC antiserum fluoresces mouse polymorphonuclear leukocytes at a dilution of 1:20 but does not fluoresce mouse thymocytes.

Optimum conditions for use of this antibody in analytical procedures should be established in each laboratory
