FITC Adsorbed Rabbit anti-Rat Macrophage

CLFAD51240

Lot: 5819F

Description:

Cedarlane's **CLFAD51240** is FITC conjugated to gamma globulin fractions of adsorbed antisera to rat macrophages. This reagent is analyzed for its fluorochrome: protein ratios; and it is used to produce direct bright fluorescence of macrophages. This antibody will not stain rat thymocytes or splenocytes and very weakly fluoresces rat PMN's.

The fluorescein conjugate is purified by removing free fluorochrome, under-conjugated and over-conjugated antibodies.

Presentation: 2 mg in phosphate buffered saline.

Protein Concentration: 2 mg/ml

Fluorescein:Protein Ratio: 1.8:1

Storage: Stable at 4°C. For long term, divide into useful aliquots and store at -20°C.

Preservatives: 0.05% sodium azide

Applications: This antibody is suitable for use in flow cytometry, immunofluorescence and cryostat sections.

Specificity: This FITC antiserum fluoresces rat macrophages at a 1:4 dilution, but does not fluoresce rat thymocytes or splenocytes and very weakly fluoresces rat PMN's.

Sensitivity: This lot (**5819F**) of antiserum fluoresces at dilutions ranging from neat to 1:8.

Optimum conditions for use of this antibody in analytical procedures should be established in each laboratory
