FITC-labelled Adsorbed Rabbit anti-Rat Mast Cell

CLFAD51340

Lot #: 5811F

Description: Cedarlane's **CLFAD51340** is FITC conjugated to gamma globulin fractions of adsorbed antisera to rat mast cells. This reagent is analyzed for its fluorochrome: protein ratios; and it is used to produce direct bright fluorescence of mast cells. This antibody will not stain rat thymocytes or splenocytes.

The fluorescein conjugate is purified by removing free fluorochrome, under-conjugated and over-conjugated antibodies.

Fluorescein:Protein Ratio: 2:1

Presentation: 2 mg of antibody in phosphate buffered saline containing 0.05% sodium azide as preservative.

Antibody Concentration: 2 mg/ml.

Storage: Avoid prolonged exposure to light. Stable at 4°C. For long term storage, divide into useful aliquots and store at -20°C.

Specificity: Conjugated antisera of this lot (**5811F**) fluoresces rat mast cells at 1:200 dilution but does not fluoresce rat thymocytes or splenocytes.

Applications: This FITC conjugated antibody can be used in flow cytometry, immunohistochemistry (frozen and paraffin sections) and immunofluorescence. Bright cell staining is seen at dilutions neat to 1:320. Lesser amounts of reagent may be sufficient, and it is recommended that the customer determine the optimum amount for each application.

Laboratory Reagent For Research Use Only
