Ig Class: Mouse IgG_{2a}

DESCRIPTION:

Cedarlane's anti-human HLA-ABC monoclonal antibody recognizes an epitope common among 43 kDa chains of the HLA-ABC antigens. These antigens appear on virtually every human nucleated cell. This antibody is suitable as a positive control for HLA tissue typing and crossmatching.

Applications: flow cytometry, complement dependent cytotoxicity and functional assays.

PRESENTATION:

Ascites: 0.5 ml and 1 ml Lyophilized.

Purified: Purified IgG buffered in PBS and 0.02% NaN₃. (Purified from ascitic fluid via Protein G Chromatography). For maximum recovery of contents, spin down tube before use.

No Azide: 1 mg purified Ig buffered in PBS, **no preservative**, 0.2 µm filtered.

Biotin, FITC, PE, AF488, AF647 and AF700: Biotin/FITC/PE/AF488/AF647/AF700 conjugated IgG buffered in PBS, 0.02% NaN₃ and EIA grade BSA as a stabilizing protein to bring total protein concentration to 4-5 mg/ml.

STORAGE/STABILITY:

For all formats, store at 4°C. **DO NOT FREEZE PE, AF488, AF647 and AF700** conjugate. For long term storage (**Ascites, Purified, Biotin and FITC**), aliquot and freeze unused portion at -20°C in volumes appropriate for single usage. Avoid freeze/thaw cycles.

SPECIFICATIONS:

Clone: W6/32

Hybridoma Production:

Immunization: Immunogen: Purified membrane of human tonsil cells
Donor: BALB/c spleen
Fusion Partner: NS1/1-Ag4.1

Specificity: Human HLA-ABC

FLOW CYTOMETRY ANALYSIS:

Tissue Distribution by Flow Cytometry Analysis:

Cell Concentration: 1×10^6 cells per test
Antibody Concentration Used: $1 \mu\text{g}/10^6$ cells
Percentage of cells stained above control: 98.0%

Human peripheral blood lymphocytes were stained with anti-HLA-ABC (clone: W6/32) (filled histogram) or Mouse IgG2a isotype control (open histogram).

N.B. Appropriate control samples should always be included in any labelling studies.

*** For optimal results in various applications, it is recommended that each investigator determine dilutions appropriate for individual use.**
