Mouse Anti-Human Alpha-Fetoprotein (AFP) Monoclonal Antibody

CLSG36508

Lot:

Immunogen: BALB/C mice were injected with purified human alpha-fetoprotein.

Clone: C3

Isotype: IgG2a

Format: 1 ml of antibody, supplied as diluted ascites containing sodium azide as preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:25-1:50 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Suitable for formalin/paraffin tissues

Specificity: Alpha-Fetoprotein (AFP) is a single chain glycoprotein of 70 kD that is normally expressed in the fetal liver, gastrointestinal tract and yolk sac. This antibody recognizes an epitope of alpha-Fetoprotein present in human and several other species. It cross reacts with human, dog and pig but not with bovine, cat, rat and mouse.

Positive Control: Fetal liver

Cellular Localization: Cytoplasmic

Storage: Store the antibody at 2-8oC. Do not use it beyond the expiration date stated on the label.
