## Mouse Anti-Human CD68

(Macrophage)

**CLSG36614**

**Lot: I902**

**Description:** This monoclonal antibody is directed against human CD68, specific to macrophages in a wide variety of human tissues. It reacts with myeloid precursors and peripheral blood granulocytes, and also stains a cell population known as Plasmacytoid T cells.

**Presentation:** 1 ml, tissue culture supernatant containing 0.05% sodium azide (NaN<sub>3</sub>) as a preservative.

**Immunogen:** Sub-cellular fraction of human alveolar macrophages.

**Isotype:** Mouse IgG<sub>1</sub> kappa

**Clone:** KP1

**Applications:** This antibody is suitable for use in immunohistochemistry. We recommend a starting dilution of 1:20 – 1:50 for use with an ABC method, with an incubation period of 30 minutes at room temperature. Formalin-fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10mM citrate buffer, pH 6.0 prior to immunostaining.

For optimal results in various applications, it is recommended that each investigator determine dilutions and incubation period appropriate for individual use.

**Positive Control:** Tonsil

**Cellular Localization:** Cell Membrane

**Storage:** 4°C. Check the label for expiration date.
