Mouse Anti-Elastin Monoclonal Antibody

CLSG36706

Lot:

Immunogen:

Bovine alpha-Elastin.

Clone:

BA-4

Isotype:

IgG1

Format:

1 mL diluted ascites containing sodium azide as preservative.

Titer/Working Dilution:

This antibody may be diluted to a titer of 1:50-1:100 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol:

We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Proteolytic treatment prior to immunostaining is required for formalin fixed tissue sections.

Specificity:

This antibody recognizes insoluble elastin, alpha-elastin, soluble non-cross linked precursor of elastin (tropoelastin). Elastin is an important polymeric protein of connective tissue that imparts elasticity to vertebrate elastic tissues. This antibody cross reacts with human, goat, dog, cat, guinea pig, pig and sheep.

Positive Control:

Heart

Cellular Localization:

Connective tissue

Storage:

Store the antibody at 2-8° c. Do not use it beyond the expiration date stated on the label.
