Mouse Anti-Synaptophysin Monoclonal Antibody

CLSG36851

Lot:

Immunogen:

BALB/C mice were injected with a synthetic peptide encoding a region near the c-terminal end of the synaptophysin protein.

Clone:

SYP02

Isotype:

IgG1

Format:

1 ml. This antibody is supplied as tissue culture supernatant containing sodium azide as preservative.

Titer/Working Dilution:

This antibody may be diluted to a titer of 1:25-1:50 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol:

We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10 mM citrate buffer, pH 6.0 prior to immunostaining.

Specificity:

This antibody is specific to 38 kD protein. Synaptophysin is an glycoprotein occurring in presynaptic vesicles of neurons in the brain, spinal cord, retina, vesicles of adrenal medulla and in neuromuscular junctions. This antibody reacts with neuroendocrine neoplasms of neural as well as epithelial types.
