Rabbit Anti-Human Ki-67 Monoclonal Antibody

CLSG80018

Lot:

Clone: SP6

Immunogen: A synthetic peptide from C-terminus of human Ki-67.

Isotype: IgG

Format: 0.5 ml. This antibody is supplied as tissue culture supernatant containing sodium azide as preservative.

Titer/Working Dilution: This antibody may be diluted to a titer of 1:100 in an ABC method. However, depending on the staining conditions employed, we suggest that final dilution should be determined by the user.

Staining Protocol: We suggest an incubation period of 30 minutes at room temperature. However, depending upon the fixation conditions and the staining system employed, optimal incubation should be determined by the user. Formalin fixed paraffin embedded tissue sections require high temperature antigen unmasking with 10 mM citrate buffer, pH 6.0 prior to immunostaining.

Specificity: Ki-67 is a nuclear protein, which is expressed in the proliferating cells. Ki-67 is preferentially expressed during late G1-, S-, M-, and G2-phases of the cell cycle, while cells in the G0 (quiescent) phase are negative for this protein. This antibody cross-reacts with human and rat.

Positive Control: Tonsil

Cellular Localization: Nuclear

Storage: Store the antibody at 2-8°C. Do not use it beyond the expiration date stated on the label.

Laboratory Reagent For Research Use Only

JV 07/10/08
