DATA SHEET

GFH99AF

Recombinant Human NT-3 (Animal-Free)

Description

Neurotrophin-3 (NT-3) is an important member of the Nerve Growth Factor (NGF) family of proteins. NT-3 promotes the growth, survival, and differentiation of neurons and synapses in the peripheral and central nervous systems. The receptor tyrosine kinase TrkC exclusively binds in high-affinity to NT-3. NT-3 also signals through the receptor tyrosine kinase TrkB, and through the low affinity nerve growth factor receptor (LNGFR).

This product is produced with no animal derived raw products. All processing and handling employs animal free equipment and animal free protocols.

Length 120 / 240 aa **Molecular Weight** 13.8 / 27.5 kDa E. coli **Accession Number** P20783

≥95% determined by reducing and non-reducing SDS-PAGE Purity

Specifications

Alternative Names Migration Inhibitory Factor, GIF, phenylpyruvate tautomerase, glycosylation-inhibiting factor, L-dopachrome

tautomerase

Biological Activity Human NT-3 is fully biologically active when compared to standard. The activity is determined by the ability to

induce C6 cells proliferation.

Endotoxin Level ≤1.00 EU/µg as measured by kinetic LAL

Lyophilized from a sterile (0.2 micron) filtered aqueous solution containing 0.1% Trifluoroacetic Acid (TFA) **Formulation**

MYAEHKSHRG EYSVCDSESL WVTDKSSAID IRGHOVTVLG EIKTGNSPVK OYFYETRCKE **AA Sequence**

ARPVKNGCRG IDDKHWNSQC KTSQTYVRAL TSENNKLVGW RWIRIDTSCV CALSRKIGRT

Preparation and Storage

Reconstitution Centrifuge vial before opening. When reconstituting the product, gently pipet and wash down the sides of the

vial to ensure full recovery of the protein into solution. It is recommended to reconstitute the lyophilized

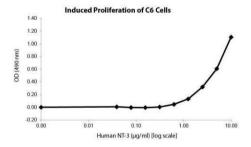

product with sterile water at 0.1 mg/ml, which can be further diluted into other aqueous solutions.

12 months from date of receipt when stored at -20°C to -80°C as supplied. **Stability and Storage**

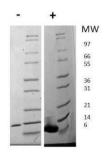

1 month when stored at 4°C after reconstituting as directed.

3 months when stored at -20°C to -80°C after reconstituting as directed.

Data

Non-reducing (-) and reducing (+) conditions in a 4 - 20% Tris-Glycine gel stained with Coomassie Blue. 1 μg of protein was loaded in each lane. Human NT-3 has a predicted Mw of 27.2 kDa (each monomer is 13.6 kDa).
