Membrane Glycoprotein G1 of Phlebovirus (SFTS virus HN6)

CATALOG NUMBER: PV-GP-40p, 50 µg

Introduction	<p>The SFTS virus is a tick-borne phlebovirus in the order Bunyavirales. SFTS virus contains a negative-sense RNA genome consisting of three segments. The small segment (S) encodes for the viral N protein and a non structural protein; the medium-sized segment (M) encodes for a precursor of the viral glycoproteins (Gn and Gc); and the largest segment (L) encodes the RNA-dependent RNA polymerase.</p> <p>The Gn and Gc glycoproteins were earlier referred to as G1 and G2 based on apparent size on gel electrophoresis.</p>
