## Annexin V-Biotin Azide-Free Lyophilized Powder

**Catalog No:** E-CK-A110U

**Sizes:** 25 µg / 50 µg / 100 µg/ 200 µg

Cat.	Products	25 µg	50 µg	100 µg	200 µg	Storage
E-CK-A110U	Annexin V-Biotin Azide-Free Lyophilized Powder	25 µg	25 µg × 2	100 µg	100 µg × 2	-20°C
<b>Manual</b>			<b>One Copy</b>			

This manual must be read attentively and completely before using this product.

If you have any problems, please contact our Technical Service Center for help.

Please kindly provide us the lot number (on the outside of the box) of the kit for more efficient service.

## Introduction

Elabscience® Annexin V- Biotin Azide-Free Lyophilized Powder is developed for long-term storage and user-defined concentrations of Biotin -conjugated Annexin V. It contains no preservatives like azides or Proclin. Annexin V is a member of the annexin family, which binds to phosphatidylserine (PS) in a calcium-dependent manner. The Biotin -conjugated format of this protein, Annexin V- Biotin, binds specifically to the PS displayed on the outer leaflet of apoptotic cell membrane. The signal of Annexin V- Biotin can be collected with flow cytometry or fluorescence microscopy to detect cell apoptosis.

## Reconstitution

Reconstitute the reagent with sterile deionized water. Make sure the final concentration is less than 1 mg/ml. (This concentration is high enough for stock solution. In our internal tests, working solutions with 1~2 µg/mL Annexin V- Biotin have best results for flow cytometry.) For example, at least 10 µl water should be added to 10 µg Annexin V- Biotin. Otherwise, the lyophilized cake may not be thoroughly soaked in water.

## Storage

The lyophilized powder is stable for at least two years when stored at -20°C in the dark after arrival. After reconstitution, the reagent can be stored in the dark under sterile conditions at 2~8°C for at least 6 months.

## Cautions

1. For maximal assay performance, this reagent should be used within 12 months. Avoid freeze / thaw cycles.
2. Detect apoptosis as soon as possible after staining to avoid the increase number of apoptosis or necrosis.
3. Avoid extended exposure of the samples to direct light to protect the fluorophores from quenching.
4. For your safety and health, please wear the lab coat and disposable gloves before the experiments.
