## Recombinant Human PLGF/PGF protein (His tag)

Catalog Number:PDEH100225

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

Synonyms PIGF2;PIGF-2;PGF;PIGF2;PIGF;PGFL

Species Human
Expression Host E.coli

SequenceLeu 19-Arg 149AccessionP49763-2Calculated Molecular Weight14.3 kDaObserved molecular weight16 kDaTagC-His

### **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** Please contact us for more information.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS, pH 7.4.

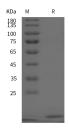

Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as

protectants before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 95 % as determined by reducing SDS-PAGE.

#### **Background**

Placental growth factor is a protein that in humans is encoded by the PGF gene. It is a secreted protein and belongs to the PDGF/VEGF growth factor family. Alternate splicing results in at least three human mature PlGF forms containing 131 (PlGF?1), 152 (PlGF?2), and 203 (PlGF?3) amino acids (aa) respectively. PlGF is mainly found as a variably glycosylated, secreted, 55 ? 60 kDa disulfide linked homodimer. The protein is a member of the VEGF (vascular endothelial growth factor) sub-family-a key molecule in angiogenesis and vasculogenesis, in particular during embryogenesis. The main source of PGF during pregnancy is the placental trophoblast. PGF is also expressed in many other tissues, including the villous trophoblast. PlGF (especially PlGF?1) and some forms of VEGF can form dimers that decrease the angiogenic effect of VEGF on VEGF R2. PlGF?2, like VEGF164/165, shows heparin?dependent binding of

neuropilin (Npn)?1 and Npn?2, and can inhibit nerve growth cone collapse. Circulating PIGF often correlates with tumor stage and aggressiveness, and therapeutic PIGF?2 antibodies are being investigated for their ability to inhibit tumor growth and angiogenesis.
