EB09472 - Goat Anti-CDO Antibody

Size: 100µg specific antibody in 200µl

Target Protein

Principal Names: CDON, Cdon homolog (mouse), CDO, MGC111524, ORCAM, cell adhesion molecule-related/down-regulated by oncogenes, surface glycoprotein, Ig superfamily member

Official Symbol: CDON

Accession Number(s): NP_058648.4

Human GeneID(s): [50937](#)

Immunogen

Peptide with sequence C-KNRQQNTIQKYDP, from the internal region of the protein sequence according to NP_058648.4.

Please note the [peptide](#) is available for sale.

Purification and Storage

Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.

Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.

Aliquot and store at -20°C. Minimize freezing and thawing.

Applications Tested

Peptide ELISA: antibody detection limit dilution 1:32000.

Western blot: Preliminary experiments gave an approx 26kDa band in Human Brain (Cerebellum and Hippocampus) lysates after 0.1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 137kDa according to NP_058648.4. The 27kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported?

Species Reactivity

Tested:

Expected from sequence similarity: Human, Dog, Cow
