Lysophosphatidic Acid Receptor 2 (EDG4) CT Blocking Peptide

BACKGROUND

EDG4 (LPA2) belongs to a family of G-protein coupled receptors whose ligands are lysophospholipids. The ligand for EDG4 (LPA2) is lysophospholipid. There are 6 known members of the EDG receptor family and they are implicated in mediating growth related effects such as induction of cellular proliferation, alterations in differentiation and survival and suppression of apoptosis. They also evoke cellular effector functions that are dependent on cytoskeletal responses such as contraction, secretion, adhesion and chemotaxis. EDG receptors are developmentally regulated and differ in tissue distribution. They couple to multiple types of G proteins to signal through ras and MAP kinase, rho, phospholipase C and several protein tyrosine kinases. EDG4 (LPA2) is expressed in testes, ovarian tumor and leukocyte containing tissues.

ORDERING INFORMATION

CATALOG NUMBER

X1573B

SIZE

50 μ g

CUSTOMER STORAGE

Product should be stored at -20°C.
Aliquot to avoid freeze/thaw cycles

FORMULATION

Provided in solution at 1 mg/ml in phosphate buffered saline.

SHIP CONDITIONS

Ship at ambient temperature, freeze upon arrival

STABILITY

Products are stable for one year from purchase when stored properly

COMMENTS

For use with EDG4 (LPA2) (NT) polyclonal antibody (Cat. No. X1570P).

INSTRUCTIONS

Incubate antibody neat with at least a 50 fold stoichiometric excess of blocking peptide at 37 deg C for 20 minutes (molecular weights of peptide and antibody are ~2.5 kDa and ~160 kDa, respectively). Antibody can then be diluted to a concentration suitable for Western blot.

Example: 10 μ l or 10 μ g of Exalpa's rabbit anti-EDG4 (LPA2) (NT) (Cat. No. X1570P) is added to 10 μ g of blocking peptide for a total volume of 20 μ l. The mixture is allowed to incubate for 20 minutes at 37 deg C prior to dilution in suitable buffer (for Western blot, etc.).
