

# SZABO SCANDIC

Part of Europa Biosite

## Produktinformation

Forschungsprodukte & Biochemikalien

Zellkultur & Verbrauchsmaterial

Diagnostik & molekulare Diagnostik

Laborgeräte & Service

Weitere Information auf den folgenden Seiten!

## LFM-A13

<b>Cat. No.:</b>	HY-110002												
<b>CAS No.:</b>	62004-35-7												
<b>Molecular Formula:</b>	C <sub>11</sub> H <sub>8</sub> Br <sub>2</sub> N <sub>2</sub> O <sub>2</sub>												
<b>Molecular Weight:</b>	360												
<b>Target:</b>	Polo-like Kinase (PLK); Btk; JAK												
<b>Pathway:</b>	Cell Cycle/DNA Damage; Protein Tyrosine Kinase/RTK; Epigenetics; JAK/STAT Signaling; Stem Cell/Wnt												
<b>Storage:</b>	<table border="0"> <tr> <td>Powder</td> <td>-20°C</td> <td>3 years</td> </tr> <tr> <td></td> <td>4°C</td> <td>2 years</td> </tr> <tr> <td>In solvent</td> <td>-80°C</td> <td>6 months</td> </tr> <tr> <td></td> <td>-20°C</td> <td>1 month</td> </tr> </table>	Powder	-20°C	3 years		4°C	2 years	In solvent	-80°C	6 months		-20°C	1 month
Powder	-20°C	3 years											
	4°C	2 years											
In solvent	-80°C	6 months											
	-20°C	1 month											

## BIOLOGICAL ACTIVITY

<b>Description</b>	LFM-A13 is a potent BTK, JAK2, PLK inhibitor, inhibits recombinant BTK, Plx1 and PLK3 with IC <sub>50</sub> s of 2.5 μM, 10 μM and 61 μM. LFM-A13 has antiproliferative activity and anticancer activity. LFM-A13 can be used in cancer-related research <sup>[1][3][4]</sup>											
<b>IC<sub>50</sub> &amp; Target</b>	Plx1 10 μM (IC <sub>50</sub> )	PLK3 61 μM (IC <sub>50</sub> )	BRK 267 μM (IC <sub>50</sub> )	BMX 281 μM (IC <sub>50</sub> )								
	FYN 240 μM (IC <sub>50</sub> )	Met 215 μM (IC <sub>50</sub> )	Btk 2.5 μM (IC <sub>50</sub> )									
<b>In Vitro</b>	<p>LFM-A13 (100 μM; 4 h) inhibits Epo-induced phosphorylation of EpoR, JAK2, BTK, STAT5, and ERK1/2 in R10 cells<sup>[2]</sup>.</p> <p>LFM-A13 (100 μM; transfection 48 h) inhibits the autophosphorylation of JAK2, Tec and BTK in COS cells without affecting the autophosphorylation of Lyn kinase<sup>[2]</sup>.</p> <p>LFM-A13 potently inhibits Plx1 with IC<sub>50</sub> of 10 μM; also inhibits BRK, BMX, FYN and Met with IC<sub>50</sub>s of 267, 281, 240 and 215 μM, respectively<sup>[3]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Proliferation Assay<sup>[3]</sup></p> <table border="1"> <tr> <td>Cell Line:</td> <td>PTK1 cells</td> </tr> <tr> <td>Concentration:</td> <td>100 μM</td> </tr> <tr> <td>Incubation Time:</td> <td>2 h</td> </tr> <tr> <td>Result:</td> <td>Significantly arrested cycle progression.</td> </tr> </table>				Cell Line:	PTK1 cells	Concentration:	100 μM	Incubation Time:	2 h	Result:	Significantly arrested cycle progression.
Cell Line:	PTK1 cells											
Concentration:	100 μM											
Incubation Time:	2 h											
Result:	Significantly arrested cycle progression.											
<b>In Vivo</b>	<p>LFM-A13 (10 or 50 mg/kg; i.p.) exhibits anti-tumor effects dose dependently in the MMTV/Neu transgenic mouse model of breast cancer<sup>[3]</sup>.FM-A13 (50 mg/kg; tiw; i.p.) attenuates DMBA-induced mammary tumorigenesis in mice by modulating a variety of factors associated with cell cycle, survival and apoptosis<sup>[4]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>											

Animal Model:	MMTV/neu transgenic mouse model <sup>[3]</sup>
Dosage:	50 or 100 mg/kg
Administration:	Intraperitoneal injection (i.p.); twice a day for 5 consecutive days a week
Result:	Attenuated mammary tumor formation in mice.
Animal Model:	DMBA-induced breast cancer mouse model <sup>[4]</sup>
Dosage:	50 mg/kg (or combined with Paclitaxel (HY-B0015) (10 mg/kg; once per week intraperitoneally))
Administration:	Intraperitoneal injection (i.p.); 3 times a week
Result:	Inhibited DMBA-induced mammary tumor incidence, average tumor number, average tumor weight, and size in BALB/c mice. Significantly decreased PLK1, cyclin D1, CDK-4, P53 and Bcl-2 expression, but increased the expression of p21, IκB, Bax and caspase 3 expression in mice.
