BIOLOGICAL ACTIVITY

Description	DM4 is an antitubulin agent that inhibit cell division. DM4 can be used in the preparation of antibody agent conjugate.
In Vitro	DM4, a structural analogue of maytansine, is a new thiol-containing and potent maytansinoid. DM4 is a cytotoxic maytansinoid drug. It is synthesized in order to link maytansinoids to antibodies via disulfide bonds. Maytansinoids inhibit tubulin polymerization and microtubule assembly and enhance microtubule destabilization, so there is potent suppression of microtubule dynamics resulting in a mitotic block and subsequent apoptotic cell death ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
