BIOLOGICAL ACTIVITY

Description	Furanodiene is a natural terpenoid isolated from Rhizoma Curcumae. Furanodiene plays anti-cancer effects through anti-angiogenesis and inducing ROS production, DNA strand breaks and apoptosis. Furanodiene suppressed efflux transporter Pgp (P-glycoprotein) function and reduced Pgp protein level ^[1] .
In Vitro	Furanodiene (1.4, 4.1, 12.2 μM; 48 hours) is effective in treating human JF 305 pancreatic cancer cells and MCF-7 breast cancer cells xenotransplanted into the zebrafish ^[1] . Furanodiene has no effect on Pgp related gene (MDR1) expression ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
