BIOLOGICAL ACTIVITY

Description	Duocarmycin DM free base, a DNA minor-groove alkylator, is an antibody agent conjugates (ADCs) toxin. Duocarmycin DM free base is based on its characteristic curved indole structure and a spirocyclopropylcyclohexadienone electrophile to act anticancer activity ^{[1][2]} .
IC ₅₀ & Target	Daunorubicins/Doxorubicins
In Vitro	The Duocarmycins and CC-1065 are members of a class of DNA minor groove, AT-sequence selective, and adenine-N3 alkylating agents, isolated from <i>Streptomyces</i> sp. that exhibit extremely potent cytotoxicity against the growth of cancer cells grown in culture^[2]. Duocarmycin shows cytotoxicity to several human cancer cells, with IC₅₀ of 22, 13.8, 3.87, 15.4, and 7.31 pM for HT-29, CL1-5, Caski, EJ, and LS174T, respectively^[3]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
