RepSox (GMP)

Cat. No.:	HY-13012G
CAS No.:	446859-33-2
Molecular Formula:	C ₁₇ H ₁₃ N ₅
Molecular Weight:	287.32
Target:	TGF-β Receptor
Pathway:	TGF-beta/Smad
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	RepSox (E-616452) (GMP) is a RepSox (HY-13012) produced by using GMP guidelines. GMP small molecules works appropriately as an auxiliary reagent for cell therapy manufacture. RepSox is a potent and selective TGF-β-RI/ALK5 inhibitor [1].
IC₅₀ & Target	IC50: ALK5 autophosphorylation (4 nM)
In Vitro	RepSox (GMP) (10 μM) induces MEFs differentiating to chemically induced pluripotent stem cells (CiPSCs) ^[1] . RepSox (GMP) (10 μM, in stage I-Stage III induction medium) induces hCiPSC cells from HEFs ^[2] . RepSox (GMP) together with Forskolin (HY-15371) increases the number of proliferative cells in MEFs expressing MyoD, confirmed by increased EdU incorporation ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
