BIOLOGICAL ACTIVITY

Description	Hydroxy-PEG2-CH2-Boc is a PEG/Alkyl/ether-based PROTAC linker can be used in the synthesis of PROTACs.
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
