## p-Nitrophenyl α-L-arabinopyranoside

Cat. No.:	HY-134429
CAS No.:	1223-07-0
Molecular Formula:	C <sub>11</sub> H <sub>13</sub> NO <sub>7</sub>
Molecular Weight:	271.22
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

Description	p-Nitrophenyl α-L-arabinopyranoside is a biochemical reagent. p-Nitrophenyl α-L-arabinopyranoside can be hydrolyzed by recombinant BgaA (rBgaA, isolated from E. coli BL21 (DE3) strain harboring pEBGA29). p-Nitrophenyl α-L-arabinopyranoside has potential application in enzyme activity detection <sup>[1][3]</sup> .
In Vitro	<p>The affinity K<sub>m</sub> value of p-Nitrophenyl α-L-arabinopyranoside with rBgaA is 6.06 mM<sup>[1]</sup>.      p-Nitrophenyl α-L-arabinopyranoside shows high activity to xylosidase–arabinosidase (xarB) gene<sup>[2]</sup>.      Application of p-Nitrophenyl α-L-arabinopyranoside in the detection of enzyme activity<sup>[3]</sup></p> <p>(1) 200 μL 2 mM p-Nitrophenyl α-L-arabinopyranoside, 100 μL enzyme, 300 μL 50 mM phosphate buffer (pH 7.0) were incubated at 37°C for 0.5, 1, and 5 h.      (2) 400 μL 0.5 M NaOH was added to terminate the reaction.      (3) Measure the absorbance of the mixture at 405 nm.</p> <p>Note: In the presence of ginsenosides, the reaction was terminated by extraction with butanol.      MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
