### BIOLOGICAL ACTIVITY

#### Description

6-Maleimidocaproic acid sulfo-NHS (Sulfo-EMCS) sodium is an alkyl/ether-based PROTAC linker that can be used in the synthesis of PROTACs<sup>[1]</sup>.

#### In Vitro

PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins<sup>[1]</sup> MCE has not independently confirmed the accuracy of these methods. They are for reference only.
