## cis-Atovaquone-d<sub>4</sub>

<b>Cat. No.:</b>	HY-13832S3
<b>Molecular Formula:</b>	C <sub>22</sub> H <sub>15</sub> D <sub>4</sub> ClO <sub>3</sub>
<b>Molecular Weight:</b>	370.86
<b>Target:</b>	Cytochrome P450; Parasite; Antibiotic; Isotope-Labeled Compounds
<b>Pathway:</b>	Metabolic Enzyme/Protease; Anti-infection; Others
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	cis-Atovaquone-d <sub>4</sub> is deuterium labeled Atovaquone. Atovaquone (Atavaquone) is a potent, selective and orally active inhibitor of the parasite's mitochondrial cytochrome bc1 complex. Atovaquone is against human and P. falciparum cytochrome bc1 activity with IC50 values of 460 nM and 2.0 nM, respectively. Atovaquone is an antimalarial agent and has the potential for the investigation of pneumocystis pneumonia, toxoplasmosis, malaria, and babesia[1][2].
<b>IC<sub>50</sub> &amp; Target</b>	Plasmodium
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
