BIOLOGICAL ACTIVITY

Description	m-PEG10-acid is a non-cleavable 10 unit PEG ADC linker used in the synthesis of antibody-drug conjugates (ADCs) ^[1] . m-PEG10-acid is also a PEG-based PROTAC linker that can be used in the synthesis of PROTACs ^[2] .	
IC ₅₀ & Target	PEGs	Non-cleavable
In Vitro	ADCs are comprised of an antibody to which is attached an ADC cytotoxin through an ADC linker ^[1] . PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
