Retinoic acid (GMP)

Cat. No.:	HY-14649G
CAS No.:	302-79-4
Molecular Formula:	C ₂₀ H ₂₈ O ₂
Molecular Weight:	300.44
Target:	RAR/RXR
Pathway:	Metabolic Enzyme/Protease; Vitamin D Related/Nuclear Receptor
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Retinoic acid (Vitamin A acid) (GMP) is Retinoic acid (HY-14649) produced by using GMP guidelines. GMP small molecules works appropriately as an auxiliary reagent for cell therapy manufacture. Retinoic acid is an agonist of RAR nuclear receptors ^{[1][2][3][4][5][6]} .
In Vitro	Retinoic acid (GMP) time- and dose- dependently induces differentiation of EC cells and ES cells into specific cell types ^[1] . Retinoic acid (GMP) induces partial differentiation of F9 embryonal carcinoma cells into endoderm cells ^[2] . Retinoic acid (GMP) (100 nM; 2-8 d) promotes photoreceptor differentiation in early postnatal retinal cultures ^[3] . Retinoic acid (GMP) (0.1 μM; 10-12 d) induces human SH-SY5Y neuroblastoma cells differentiation with long cell processes ^[4] . Retinoic acid (GMP) (0-10 μM; 48 h) dose-dependently induces morphologic differentiation of LA-N-1 human neuroblastoma cells ^[5] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	Retinoic acid (GMP) (0.3 μM; embryos are immersed in tank water containing retinoic acid) accelerates of rod differentiation is observed following 24 and 48 hours of application in zebrafish ^[6] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
