# Taltobulin trifluoroacetate

MedChemExpress

Cat. No.:	HY-15584A	
CAS No.:	228266-41-9	~
Molecular Formula:	$C_{29}H_{44}F_{3}N_{3}O_{6}$	0
Molecular Weight:	587.67	U
Target:	Microtubule/Tubulin; ADC Cytotoxin; Apoptosis	$\searrow$
Pathway:	Cell Cycle/DNA Damage; Cytoskeleton; Antibody-drug Conjugate/ADC Related; Apoptosis	
Storage:	<b>4°C, sealed storage, away from moisture</b> * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)	Ň

### SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 39 mg/mL (66.36 mM)

\* "≥" means soluble, but saturation unknown.

	Solvent Mass Concentration	1 mg	5 mg	10 mg
Preparing Stock Solutions	1 mM	1.7016 mL	8.5082 mL	17.0164 mL
ototitottations	5 mM	0.3403 mL	1.7016 mL	3.4033 mL
	10 mM	0.1702 mL	0.8508 mL	1.7016 mL

Please refer to the solubility information to select the appropriate solvent.

DIOLOGICALACITY		
Description	Taltobulin trifluoroacetate (H antimicrotubule agent that ci inhibits the polymerization o as apoptosis <sup>[1]</sup> .	HTI-286 trifluoroacetate), a synthetic analogue of the tripeptide hemiasterlin, is a potent ircumvents P-glycoprotein-mediated resistance in vitro and in vivo. Taltobulin trifluoroacetate of purified tubulin, disrupts microtubule organization in cells, and induces mitotic arrest, as well
IC <sub>50</sub> & Target	Traditional Cytotoxic Agents	
In Vitro	Taltobulin (HTI-286; 0.2-7.3 n and melanoma cell lines) with MCE has not independently c Cell Proliferation Assay <sup>[1]</sup> Cell Line:	M; 3 days) inhibits the growth of 18 tumor cell lines (leukemia, ovarian, NSCLC, breast, colon, th an average IC <sub>50</sub> of 2.5±2.1 nM and a median value of 1.7 nM <sup>[1]</sup> . confirmed the accuracy of these methods. They are for reference only. Leukemia CCRF-CEM cell line; ovarian 1A9 cell line; NSCLC A549 and NCI-H1299 cell lines; breast MX-1W and MCF-7 cell lines; colon HCT-116, DLD-1, Colo205, KM20, SW620, S1, HCT-
