DNA-PK-IN-13

Cat. No.:	HY-158166
Molecular Formula:	C ₂₂ H ₂₂ N ₈ O
Molecular Weight:	414.46
Target:	DNA-PK
Pathway:	Cell Cycle/DNA Damage; PI3K/Akt/mTOR
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	DNA-PK-IN-13 (Compound SK10) is a DNA-PK inhibitor that exhibits potent inhibitory activity (IC ₅₀ = 0.11 nM). DNA-PK-IN-13 regulates tumor cell proliferation by decreasing the expression level of γH2A.X and enhancing the sensitivity of tumor cells to chemotherapeutic agents. DNA-PK-IN-13 is suitable for oncology studies ^[1] .																
In Vitro	<p>DNA-PK-IN-13 displays the best antiproliferative activities with IC₅₀ values of 0.6 μM against Jurkat T-cell^[1]. DNA-PK-IN-13 (0.1-40 μM; 10 min) concentration-dependently decreases the expression level of γH2A.X in Jurkat cells and HepG2 cells^[1].</p> <p>DNA-PK-IN-13 (1 μM; 24 hours) in combination with doxorubicin (HY-15142A) (0.1 μM) results in a significant decrease in the proportion of S-phase and an increase in the proportion of G2/M-phase in the Jurkat cell^[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Western Blot Analysis^[1]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>HepG2 cells, Jurkat cells</td> </tr> <tr> <td>Concentration:</td> <td>0.1; 0.5; 5; 10; 20; 40μM</td> </tr> <tr> <td>Incubation Time:</td> <td>10min</td> </tr> <tr> <td>Result:</td> <td>Concentration-dependently decreased the expression level of γH2A.X in Jurkat cells and HepG2 cells. DNA-PK-IN-13 can affect the production of γH2A.X and thus inhibit DNA damage repair.</td> </tr> </table> <p>Cell Cycle Analysis^[1]</p> <table border="1"> <tr> <td>Cell Line:</td> <td>Jurkat cells</td> </tr> <tr> <td>Concentration:</td> <td>1μM; Dox 0.1μM</td> </tr> <tr> <td>Incubation Time:</td> <td>24h</td> </tr> <tr> <td>Result:</td> <td>DNA-PK-IN-13 alone did not demonstrate statistically significant differences in the cell cycle. However, when combined with doxorubicin, DNA-PK-IN-13 influenced the cell cycle, contributing to cell death.</td> </tr> </table>	Cell Line:	HepG2 cells, Jurkat cells	Concentration:	0.1; 0.5; 5; 10; 20; 40μM	Incubation Time:	10min	Result:	Concentration-dependently decreased the expression level of γH2A.X in Jurkat cells and HepG2 cells. DNA-PK-IN-13 can affect the production of γH2A.X and thus inhibit DNA damage repair.	Cell Line:	Jurkat cells	Concentration:	1μM; Dox 0.1μM	Incubation Time:	24h	Result:	DNA-PK-IN-13 alone did not demonstrate statistically significant differences in the cell cycle. However, when combined with doxorubicin, DNA-PK-IN-13 influenced the cell cycle, contributing to cell death.
Cell Line:	HepG2 cells, Jurkat cells																
Concentration:	0.1; 0.5; 5; 10; 20; 40μM																
Incubation Time:	10min																
Result:	Concentration-dependently decreased the expression level of γH2A.X in Jurkat cells and HepG2 cells. DNA-PK-IN-13 can affect the production of γH2A.X and thus inhibit DNA damage repair.																
Cell Line:	Jurkat cells																
Concentration:	1μM; Dox 0.1μM																
Incubation Time:	24h																
Result:	DNA-PK-IN-13 alone did not demonstrate statistically significant differences in the cell cycle. However, when combined with doxorubicin, DNA-PK-IN-13 influenced the cell cycle, contributing to cell death.																
In Vivo	DNA-PK-IN-13 has good oral bioavailability (F = 31.8%) ^[1] .																

Pharmacokinetic Analysis in DNA-PK-IN-13^[1]

Route	Dose (mg/kg)	AUC _{0-t} (ug/L·h)	AUC _{0-∞} (ug/L·h)	t _{1/2} (h)	T _{max} (h)	Cl (L/h/kg)	V _z (L/kg)	C ₀ (ug/L)	C _{max} (ug/L)	F (%)

DNA-PK-IN-13 (i.p.; 10 mg/kg; single dose) has tumor suppressor activity in CT26 colon cancer mice. Co-administration with doxorubicin (2.5 mg/kg) is effective and safe^[1].

DNA-PK-IN-13 (i.p.; 10 mg/kg; 13 consecutive days) in combination with PD-1/PD-L1 inhibitors inhibits tumor growth more significantly^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	CT26 colon cancer mouse ^[1]
Dosage:	10 mg/kg single dose
Administration:	i.p
Result:	Single-agent treatment reduced tumor weight by 30.8% and tumor volume by 32.1%. Co-administration with doxorubicin (2.5 mg/kg) produced more significant tumor inhibitory activity, with a TGI of 50.2%. No significant weight loss or deaths were observed.
