## Liothyronine-d<sub>3</sub>

<b>Cat. No.:</b>	HY-A0070AS3
<b>Molecular Formula:</b>	C <sub>15</sub> H <sub>9</sub> D <sub>3</sub> I <sub>3</sub> NO <sub>4</sub>
<b>Molecular Weight:</b>	653.99
<b>Target:</b>	Endogenous Metabolite; Thyroid Hormone Receptor; Isotope-Labeled Compounds
<b>Pathway:</b>	Metabolic Enzyme/Protease; Vitamin D Related/Nuclear Receptor; Others
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Liothyronine-d <sub>3</sub> is deuterated labeled Liothyronine (HY-A0070A). Liothyronine is an active form of thyroid hormone. Liothyronine is a potent thyroid hormone receptors TR $\alpha$ and TR $\beta$ agonist with K <sub>s</sub> of 2.33 nM for hTR $\alpha$ and hTR $\beta$ , respectively [1][2][3].
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . hepatocarcinomaLiothyronine (T3, 100 nM) stimulates the proliferation of hepatocarcinoma cells in which TR $\beta$ 1 is overexpressed <sup>[2]</sup> . Liothyronine binds to the human $\beta$ 1 thyroid hormone receptor (hTR $\beta$ 1), and changes its conformation. Liothyronine promotes growth, induces differentiation and regulates metabolic effects <sup>[3]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
