Theophylline-d₆

Cat. No.:	HY-B0809S		
CAS No.:	117490-39-8		
Molecular Formula:	C ₇ H ₂ D ₆ N ₄ O ₂		
Molecular Weight:	186.2		
Target:	Phosphodiesterase (PDE); Adenosine Receptor; Autophagy; Endogenous Metabolite		
Pathway:	Metabolic Enzyme/Protease; GPCR/G Protein; Autophagy		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

BIOLOGICAL ACTIVITY

Description	Theophylline-d ₆ is the deuterium labeled Theophylline. Theophylline is a nonselective phosphodiesterase (PDE) inhibitor, adenosine receptor blocker, and histone deacetylase (HDAC) activator.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
