BIOLOGICAL ACTIVITY

Description	Cinoxacin-d ₅ is the deuterium-labeled Cinoxacin (HY-B1085) ^[1] . Cinoxacin (Compound 64716), a synthetic antimicrobial related to the quinolone class of orally active antibacterial agent. Cinoxacin has antibacterial activity against many gram-negative aerobic bacteria and inhibits bacterial DNA synthesis. Cinoxacin can be used for the research of urinary tract infections and bacterial prostatitis ^{[2][3]} .
IC₅₀ & Target	MIC: 4-64 µg/mL (Gram-negative aerobic bacteria) ^[2]
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
