Carprofen-d3

Cat. No.:	HY-B1227S
CAS No.:	1173019-42-5
Molecular Formula:	C ₁₅ H ₉ D ₃ ClNO ₂
Molecular Weight:	276.73
Target:	COX; FAAH; Autophagy; Endogenous Metabolite
Pathway:	Immunology/Inflammation; Metabolic Enzyme/Protease; Neuronal Signaling; Autophagy
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Carprofen-d3 is the deuterium labeled Carprofen. Carprofen is a nonsteroid anti-inflammatory agent, acts as a multi-target FAAH/COX inhibitor, with IC ₅₀ s of 3.9 μM, 22.3 μM and 78.6 μM for COX-2, COX-1 and FAAH, respectively.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
