Oxyphenbutazone-¹³C₆

Cat. No.:	HY-B1355AS1
Molecular Formula:	C ₁₃ ¹³ C ₆ H ₂₀ N ₂ O ₃
Molecular Weight:	330.33
Target:	COX; Bacterial; Isotope-Labeled Compounds
Pathway:	Immunology/Inflammation; Anti-infection; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Oxyphenbutazone- ¹³ C ₆ is the ¹³ C ₆ labeled Oxyphenbutazone (HY-B1355A). Oxyphenbutazone is a phenylbutazone derivative, with anti-inflammatory effect. Oxyphenbutazone is a non-selective COX inhibitor. Oxyphenbutazone is the metabolite of Phenylbutazone (HY-B0230). Oxyphenbutazone selectively kills non-replicating Mycobacterium tuberculosis[1][2].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
