## Nefazodone-d6 hydrochloride

<b>Cat. No.:</b>	HY-B1396S
<b>Molecular Formula:</b>	C <sub>25</sub> H <sub>27</sub> D <sub>6</sub> Cl <sub>2</sub> N <sub>5</sub> O <sub>2</sub>
<b>Molecular Weight:</b>	512.5
<b>Target:</b>	5-HT Receptor; Adrenergic Receptor
<b>Pathway:</b>	GPCR/G Protein; Neuronal Signaling
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Nefazodone-d6 hydrochloride (BMY-13754-d6) is the deuterium labeled Nefazodone hydrochloride. Nefazodone hydrochloride (BMY-13754) is a potent and selective 5HT <sub>2A</sub> (K <sub>i</sub> =5.8 nM) antagonist with moderate inhibition of 5-HT and noradrenaline uptake (IC <sub>50</sub> of 290 and 300 nM, respectively). Nefazodone hydrochloride is a phenylpiperazine antidepressant with less alpha-adrenergic blocking activity <sup>[1][2]</sup> .
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
