9-Aminoacridine-¹³C₆

Cat. No.:	HY-B1422S
Molecular Formula:	C ₇ ¹³ C ₆ H ₁₀ N ₂
Molecular Weight:	200.19
Target:	Bacterial; HIV; Isotope-Labeled Compounds
Pathway:	Anti-infection; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description

9-Aminoacridine-¹³C₆ is the ¹³C-labeled 9-Aminoacridine (HY-B1422). 9-Aminoacridine, a fluorescent probe, acts as an indicator of pH for quantitative determination of transmembrane pH gradients (inside acidic). 9-Aminoacridine is an antimicrobial. 9-Aminoacridine exerts its antimicrobial activity by interacting with specific bacterial DNA and disrupting the proton motive force in *K. pneumoniae*. 9-Aminoacridine is a HIV-1 inhibitor and inhibits HIV LTR transcription highly dependent on the presence and location of the amino moiety. 9-Aminoacridine inhibits virus replication in HIV-1 infected cell lines. 9-Aminoacridine is used as a Rifampin (RIF; HY-B0272) adjuvant for the multidrug-resistant *K. pneumoniae* infections^{[1][2][3]}.
