## Melperone-d<sub>4</sub> hydrochloride

Cat. No.:	HY-B2169S2
CAS No.:	1219798-80-7
Molecular Formula:	C <sub>16</sub> H <sub>19</sub> D <sub>4</sub> ClFNO
Molecular Weight:	303.84
Target:	Isotope-Labeled Compounds
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Melperone-d <sub>4</sub> (hydrochloride) is the deuterium labeled Melperone. Melperone, a butyrophenone, is an antipsychotic agent used for sleep induction which is frequently prescribed in psychiatric setting[1]. Melperone has been used for a variety of indications, including the treatment of schizophrenia, but also for agitation in the elderly[2].
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
