<b>Description</b>	Acid Red is a class of synthetic dyes commonly used in the textile, paper and ink industries. They are in the category of acid dyes, which means they are water soluble and have acidic properties. Acid Red dye produces bright, vibrant colors that don't fade easily, but are not as durable as some other dyes. They can be used to dye a wide variety of fibers including wool, silk and nylon, as well as paper and leather.
<b>In Vitro</b>	Acid Red is a biochemical reagent that can be used as a biological material or organic compound for life science related research. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
